## ① Function Selection Switch

### ■ BLC (Back Light Compensation)

This feature would be useful when camera is facing an object that has excessive light behind it. BLC prevents the center of object from too much darkness.  
E.g.: Video camera in the store facing the entrance doors.

### ■ AGC (Automatic Gain Control)

With AGC ON, the setting, camera's sensitivity is automatically increased when the level of ambient light drops. AGC function automatically controls signal gain in the range of maximum 28dB.

### ■ LED

This camera can switch to the COLOR mode to support the best color image in the day time and switch to the B/W mode for the clear image in the night time.

### ■ DSS (Digital Slow Shutter)

This camera can detect automatically darkness or night and support it to take a clear and bright image. As the grade of darkness, this camera can accumulate up to 32 fields.

### ■ D-ZOOM (Digital Zoom)

This camera can magnify its image in a distance. On the mode of D-ZOOM, it magnifies twice (x2) than the real image.

### ■ FL (Flickerless)

If the camera is used with 50Hz fluorescent lighting, there maybe flicker on the screen. In this case, FL switch should be set to ON position. But, FL switch should be set to OFF position if 60Hz power source is used.

## ② V.PHASE Adjustment V.R (AC 24V / DC 12V Input Model)

If the camera is to be used in LineLock mode, the vertical phase may require adjustment to synchronize the vertical phase of the camera with other camera in the system. Make this adjustment when the vertical phase of the camera does not match with other cameras or systems. For correct adjustment, use a multi-channel oscilloscope. The V.PHASE adjustment can be readjusted.

## ③ ELC / DC LEVEL Adjustment V.R

Used to adjust video output level of DC driven auto iris lens or ELC mode. When the brightness control of the monitor does not operate correctly.

## ④ Power Indicate LED

## ⑤ Cable (Power In / Video Out) Connector

## ⑥ Illuminator Control Connector (IR Illuminator Type Only)

## ⑦ VIDEO OUT Jack: Video signal output 75ohms 1Vp-p composite signal.

## 5. Installation

### 1. Connecting to Monitor

- Cable the VIDEO out to the monitor video in jack.

- As the connecting method varies with the instruments, refer to the manual supplied with the instrument.
- Connect the cable after power is turned off.
- Set the 75 $\Omega$ / Hi-Z selection switch as shown below if you have an intermediate device.

## 2. Connecting to Power Supply

### . DC 12V Input Model ➡

- The wire is non-polarized.
- Use AC 24V ~ power source or DC 12V = power source.

No.	Line Color	Function
#1	RED	DC12V
#2	ORANGE	GND
#3	BLACK	GND(VIDEO)
#4	YELLOW	VIDEO OUT
#5	GREEN	Not Used
#6	BROWN	Not Used

### . AC 24V / DC 12V Input Model ➡

- The wire is polarized.
- Use DC 12V = power source.
- Note: Make sure you are using only the supplied AC adapter.

No.	Line Color	Function
#1	RED	DC12V/AC24V(H)
#2	ORANGE	GND/AC24V(N)
#3	BLACK	GND(VIDEO)
#4	YELLOW	VIDEO OUT
#5	GREEN	Not Used
#6	BROWN	Not Used

### 3. Zoom and Focus Adjustment

- Remove the front body from the main body unscrews the four fixed screws.

#### • Weather Proof Camera

- Unlock the zoom(or the focus) handle to release it.
- Adjusting the zoom(or the focus) handle by moving it to Wide(Near) or Tele(Far) position.

#### • Lens View

- After adjustment, tighten the zoom(or focus) handle, taking care that the adjusted position does not change.
- After adjusting zoom and focus the varifocal lens, reinstall the front body and main body by screw the four fixed screws.

#### 4. Connecting to IR Illuminator (IR Illuminator Type Only)

- Remove the rear body from the main body unscrews the four fixed screws.
